REPLACEMENT PATIO DOOR

The Encore Vinyl Sliding Patio Door adds traditional, classic styling to your home. The Encore was designed with the charm of the Victorian Era, yet built to last with the latest advanced materials and highest levels of energy efficiency.

All Encore Sliding Patio Doors are manufactured with heavy multi-chambered vinyl extrusions. Frames are welded at the header with a strong durable sill, mechanically fastened to the jambs. The door lites are constructed of the same quality vinyl extrusions, with aluminum reinforcement and all corners are welded assuring strength and stability.

The hardware used on the Encore Sliding Patio Door is what you would expect from a quality Seaway product. Only the finest. Heavy-duty, "Tandem" rollers for easy gliding open and close. Strong dependable locking hardware with a full interlock system where the two lites meet and a "Lift-Out Prevention Track" adding to the security of the lock system.

Adding to the Encore Sliding Patio Door's energy efficiency is tempered 7/8" insulated glass with optional Low-E and Argon gas.

Available in either Euro-White or Beige, the Encore Sliding Patio Door will add to the comfort, appearance and value of your home.
