Change Your Entrance From Ordinary to Elegant and Save Energy Too!

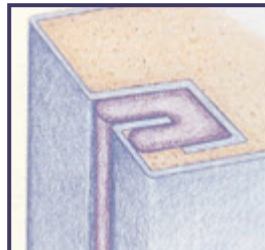

Your entryway creates your home's first impression. Seaway's EntryPride doors offer nearly limitless design options with elegant decorative glass doorlites and matching sidelites to enhance your home's curb appeal.

EntryPride is a superior selection for controlling your energy costs. Its strong galvanized steel shell, solid dent-resistant core of insulating polyurethane foam, neoprene rubber weather stripping, and durable, triple self-sealing rubber door sweep, make Seaway's EntryPride door the most secure and energy efficient choice for your home. And, EntryPride doors won't rust, warp, expand, shrink, or swell like wood doors. In addition, EntryPride doors are backed by Seaway's 20-year limited warranty.

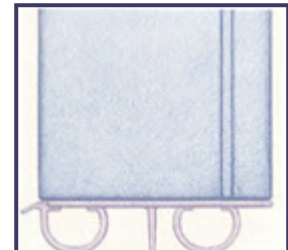

Engineered with Superior Quality

EntryPride's core contains no voids and no hollow spots. An R-15 insulating value is five times better than wood doors and nearly twice that of polystyrene doors! EntryPride saves energy in the winter and the summer.

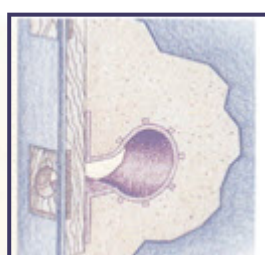

Not all steel entry doors have one! The vinyl thermal break locks skins together, while separating the exterior and interior steel surfaces to provide a thermal break that minimizes heat loss, condensation, and ice build-up on the inner skin, regardless of the outside temperature.

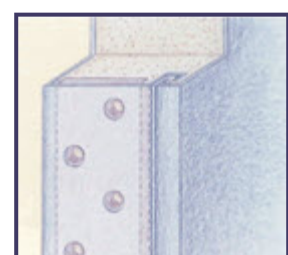

Twin compression tubes and an extruded vinyl sweep-blade joins with the threshold to seal the door bottom and prevent major energy loss. You will not experience leaks, drafts, or ice build-up.

EntryPride doors offer elegant embossing with deeper and more sharply defined contours than many other doors available on the market today.

EntryPride's locking system provides a rigid base for locksets and discourages intruders. It is available for use with all frames and most types of security hardware.

Its plate is riveted within the door, eliminating sags and increasing EntryPride's strength and durability.
